

YNOT finance

Trading redefined

Powered by

Problems

There is something missing in the DeFi verse. What's that?

01

Just for Market Makers

Liquidity is a game only for Market Makers

02

Trending = Loss

A trending market will turn into an impermanent loss for Market Maker.

03

Trading Fee

Trading attracts fee!!!!!!

Solutions

YNOT finance unlockcng liquidity from the market!

01

Long or Short

Long an asset or Short sell it without worrying liquidation, we got it all covered for you

02

No more fee

Open and close your position with no fee at all, how cool is that!

03

Not just 0.25%

Liquidity Miners earn more than 0.25% on each trade as there is a part of liquidity that comes from trading and is not rewarded.

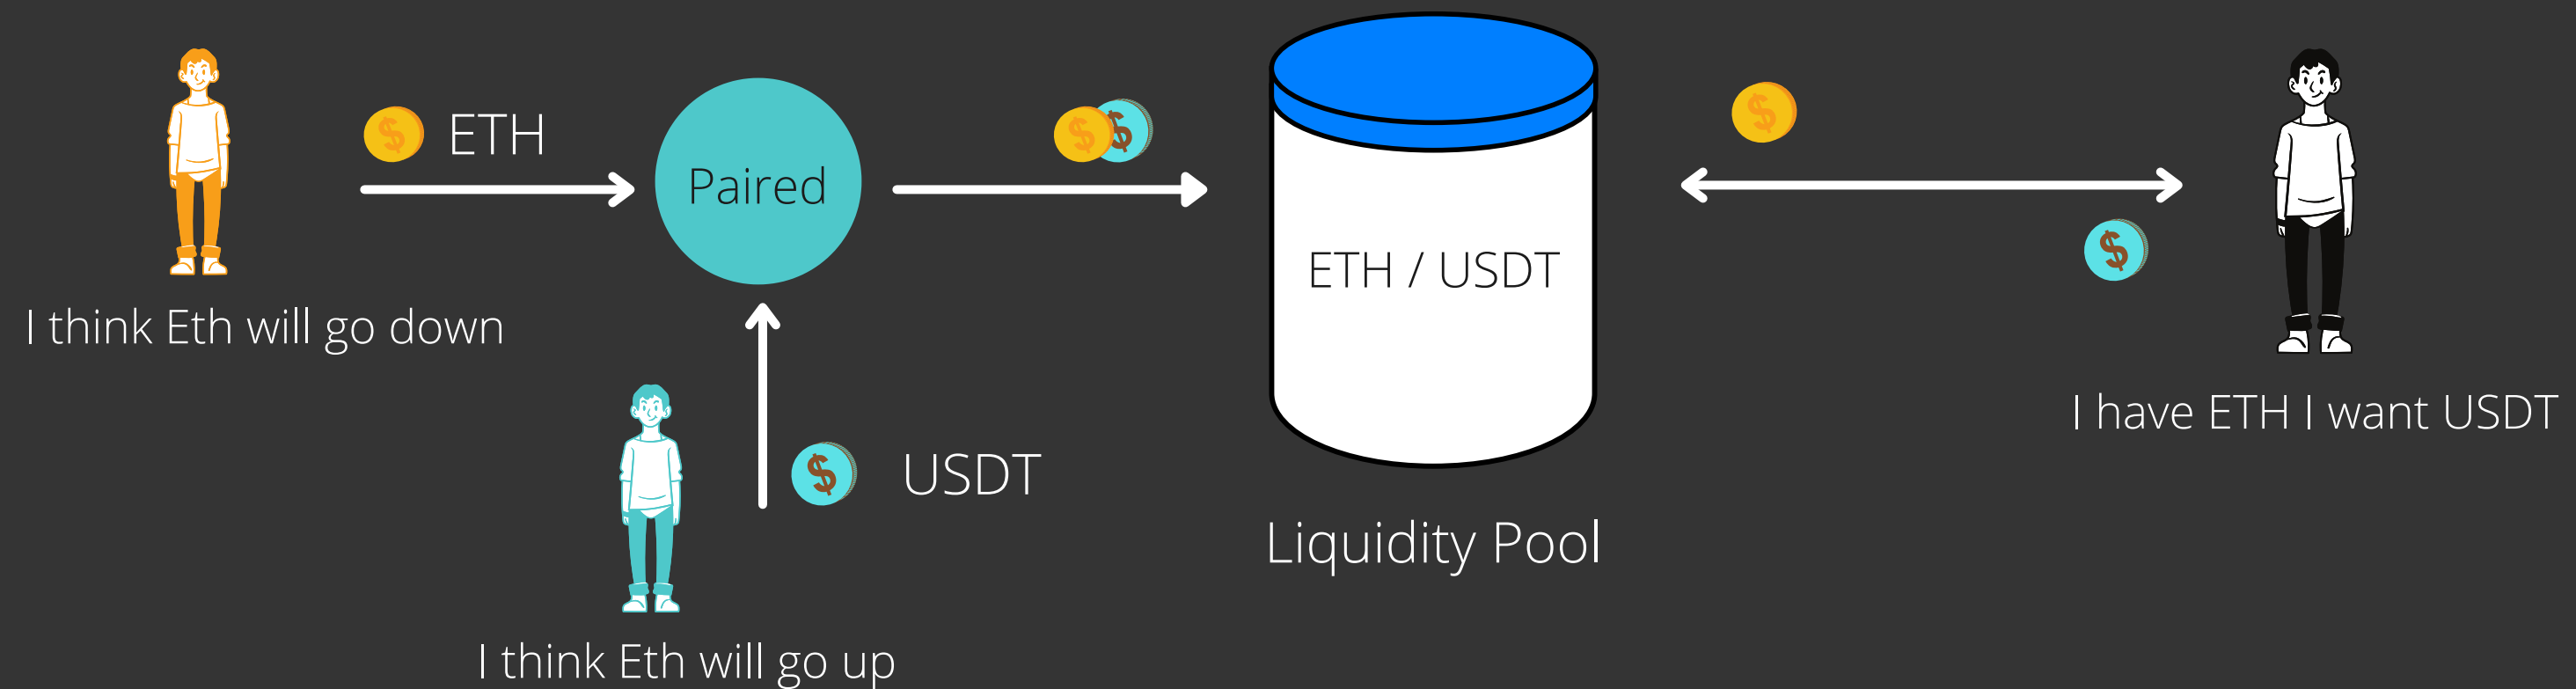

YNOT finance

YNOT finance is a DeFi protocol unlocking liquidity from traders and providing feesless trading facilitated by quantum entangled NFTs.

How Do We Do It

We enable a two-layer of trading where traders can open a position (Long or Short) with Zero Fees, these positions are then used to provide liquidity to the market on which the second layer of trader trades. The first layer of traders gets the token of participation in **NFTs**, in return for their trade positions, which they can use to close when they are done.

Quantum Entangled NFTs

Quantum Entangled NFTs are a pair of NFT that are generated at a single transaction and will be burned in a single transaction, this guarantees both the parties to receive their part of the position to be transferred when one of the NFTs get burned.

Unlocking Liquidity

Market Makers

Market Maker gets incentives more than any platform over the market.

Traders

Free trading makes it more attractive for a trader to trade, which internally is used as liquidity over the platform.

YTC Token

YTC token incentivise Market Makers and Traders to hold their position for a long.

Total Fee

0.3%

Liquidity Miners

0.25%

YTC-USDT LP

0.04%

YourTruce

0.01%

YTC token

YourTruce Community Token

A token designed to give power back to the community, the YTC token allows users to vote for certain decisions over the protocol.

Automated Liquidity

0.04% of Fee collected from the swap goes to the vault as a staking reward for providing liquidity to the YTC-USDT pair.

Rewards for very one

YTC is rewarded to whoever helps its platform to grow, like Liquidity miners, Traders, Promoters. It's for you also.
